

GTS Virtual Private Server

Virtual server solution provided as a service

Managed and ICT solution

GTS Virtual Private Server (VPS) is a ready to use solution, working and acting almost in the same way as traditional server, but more scalable, more reliable and sized exactly according to your actual needs.

GTS VPS gives business customers an opportunity to make a radical change in how computing and storage resources are implemented and paid for. The principle idea of the service is to provide resources, not fixed and inflexible server units. This allows businesses to precisely and dynamically select, allocate and move computing resources when and where they are needed. Every organization that uses the Internet in the sales, distribution or service department, or provides content to end users or needs expandable computing power to support growing requirements for availability, fast response and cost control can benefit from GTS VPS – the GTS Virtual Private Server is the ideal solution for everyone.

GTS Virtual Private Server // SERVICE BENEFITS

- **Provided as a fully-managed** reliable and secure environment
- Service operations performed by GTS **technical experts available on demand**
- **TCO reduced to minimum** – recurring monthly fees for the service are direct operating expenses; no HW or maintenance expenses, reduces losses due to communication outages and other consequences
- **Easy deployment and day-to-day** provisioning lead time
- **Full outsourcing** allows the customer's IT teams to focus on their main priorities
- **Unrivalled flexibility** adapts resources to suit customer needs
- **Self-service for monitoring and control**
- A range of additional options: high availability, backup and storage
- **VPS hosting on** the premises of the provider's **data center** that **meets** the strictest **qualitative data center parameters**

GTS Virtual Private Server

// SOLUTION DESCRIPTION

COMPUTING AND STORAGE RESOURCES

- **Ready-to-use virtual servers**, with pre-installed operating systems and standard applications
- **Enterprise class technology (VMware, Cisco and NetApp)** – delivers maximum achievable flexibility and control in usage

- **Completely redundant platform architecture** – eliminates unexpected downtime due to infrastructure failures

SECURITY

- Operated and monitored by experienced and certified professionals
- Several levels of customer server separation using market-proven technology

COMPLETE SOLUTION

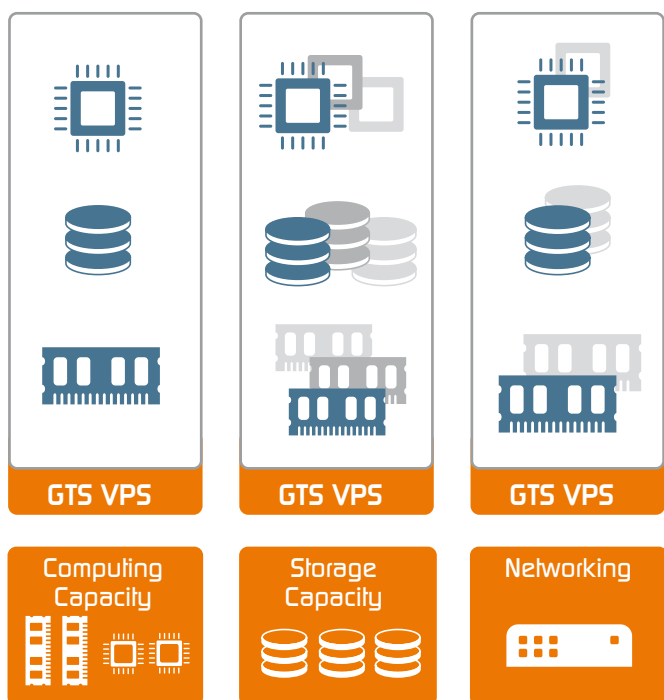

- **Data Backup, customizable security, advanced monitoring, web application** for self-care and consultancy services
- Services can also be tailored to suit the specific needs of particular customers
- No need to think about software updates and maintenance – **things simply work.**

Typical Service Application

Every organization that provides advanced business websites or provides web portals or application content to end users or uses test servers for developers or needs scalable and flexible computing power should consider GTS Virtual Private Server.

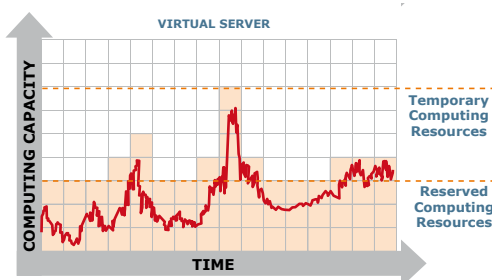

Simply tell us about your business plan and we will size, configure and manage your computing resources.

Administration Layer
